Pelvic Ultrasound
(Pelvic Sonogram)

Appointment Date and Time: _____/_____/_____ at ______________________________

Diagnostic pelvic ultrasound is a test that uses sound waves instead of x-rays to make pictures. It is a painless procedure.

A gel is applied to the abdominal (belly) area. Then the technologist or doctor moves a small object that looks like a microphone over the same area. You will need to remain still and lie quietly during the examination. If this is a problem, let the scheduler know. Your bladder must be full when you arrive for this procedure. The procedure takes about 30 minutes with a full bladder, or as long as 2 hours if your bladder is not full.

One (1) to 2 hours before the procedure, drink 2 to 3 glasses of any non-carbonated clear liquid, such as apple juice or water. If you are unable to drink, please do not urinate for 2 to 3 hours before your appointment time. Your bladder must be full at the time of the sonogram.

Please arrive at the Radiology department 15 minutes before your scheduled appointment time. If you have any questions or need to reschedule the appointment, please call (816) 234-3270.

Results:

Call your health care provider at least 24 hours after the test has been completed to obtain the procedure results.
