Superscripts explained:

aSome examples of unprotected sex are lack of any contraception (condom or hormonal method) or inconsistent/questionable use of hormonal method.

bIf past due date for next Depo shot, answer is "No."

cLARC = long-acting reversible contraception (such as IUD, implant)

dCiclopropane use of systemic glucocorticoids is not a contraindication for one-time dose of ulipristal, although caution may be taken.

eSome evidence to suggest that hormonal contraceptive (such as OCP, patch, ring method) may decrease effectiveness of ulipristal, thus the recommendation to administer Levonorgestrel.

Why Ulipristal versus Levonorgestrel for EC? Pregnancy risk with ulipristal is 42% lower than levonorgestrel at 72 hours, 65% lower in first 24 hours. Ulipristal is significantly more effective if BMI >25 or weight >75 kg. Additionally, the efficacy of Ulipristal does not decrease over the 120 hour EC treatment window.
